**10East Corp. is an Application Service Provider of Business Management Solutions to the North American Railroad Industry.**

Jacksonville, FL – April 15, 2004 – Today 10East Corp. introduced the Sharp Zaurus SL-6000, the latest in the Sharp line of Personal Mobile Tools. “This latest innovation in the mobile tool has some very compelling features that directly support the needs of our industry,” says Lester Hightower, Chief Technology Officer, 10East.

New features include a new rugged case that can withstand a drop from one meter onto concrete, without sustaining damage. “Although we have had great success with past designs, we appreciate the extra effort in this area. It also has the very first four-inch full native VGA (640 x 480) screen in a handheld form factor. The CG Silicon screen optimizes the properties of both transmissive and reflective modes, providing outstanding resolution and clarity under virtually any lighting condition, even in bright sunlight. Since Sharp is a world leader in screen technology, this didn’t surprise us as much as it pleased us. For our users that need real-time, fast, wireless access, the Zaurus SL-6000 has built-in 802.11b networking, and if you want “Swiss Army Knife” functionality, there is an optional expansion jacket, with additional battery, another CF slot, and another communication port, giving our customers the flexibility to tailor the device to the most demanding needs,” says Hightower.

10East is building a complete business intelligence suite for the rail industry, built upon their powerful Mobile Business Platform and their RailDOCS™ service. “We have found the Zaurus products to be tough and dependable. They meet the rigors of our demanding environment,” said Mike Wilson, Vice President, 10East. “It’s not practical for our customers to lug around a bulky, bloated laptop to get their work done. The SL-6000’s form factor, durable case, bright screen, expandability, and built in wireless capabilities make it ideal for our railroad customers.” Hightower went on to explain, “We have found that Java applications work flawlessly on this device, so expanding corporate applications to leverage the hardware investment is as simple as a recompile of your existing Java app. Also, running IBM’s WebSphere, our customers can connect to corporate Web applications like Lotus Notes or Outlook based PIM and e-mail, as well as retrieve information from IBM’s DB2 database. The SL-6000 is simply the most capable and versatile mobile tool we have ever seen. We are proud to be Sharp’s Value Added Reseller to our industry.”

RailDOCS™ (**Railway Daily Operations Control System**), the flagship service offering of 10East Corp., has been enabling world class **business management** in the rail sector since 1996. RailDOCS™ provides railroads, transits, and light rail customers with tools that enable the efficient management of business intelligence, business processes, personnel, projects, and tasks, while lowering capital and operating costs. 10East customers include the rail giants CSX Transportation and Union Pacific Railroad, along with many others.
